

Fuel Pump Removal Tools

BMW | Land Rover | Rover | Vauxhall/Opel

Description

Two sleeves are supplied to increase the application list. The BMW application allows the removal of the sprocket from the shaft when removing the injection pump VP44 and HP CR Pump. Used without centring ring for VP Pumps and with Common rail pumps.

This kit has a shorter Puller body to fit transverse engines. The applications for Vauxhall/Opel | Land Rover and Rover is specifically for transverse mounted engines where space is at a premium.

Packaging

Poly bag and header
